

Check or Checkmate:

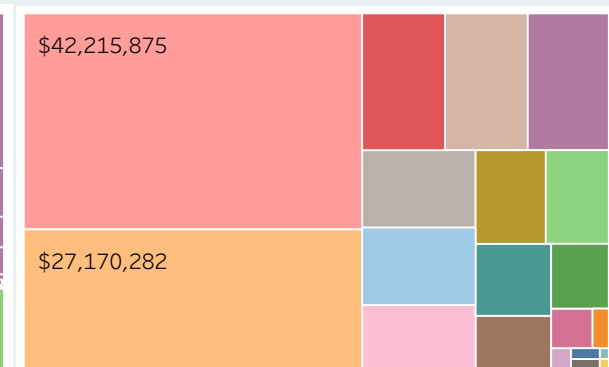

Airplane-Wildlife Collisions 2001-2015

Out of over 28,000 wildlife strikes on airplanes recorded between 2001-2015, 94.7% ended up costing airlines and airports \$0 in aircraft repairs. Nevertheless, the remaining **5.3% of collisions account more than \$100 billion of damage** in addition to the huge amount of animal deaths by collisions. This dashboard allows you to explore and see which airports had the highest number of collisions by species, the highest wildlife strike-related costs, and the most human passengers during this period.
